

PURPOSE

Auto Care Wrapped is a company-scoped “year in review” experience for member organizations. Each company sees engagement metrics, narrative copy, and CTAs to Auto Care products and events. Data is scoped by Impexium `RECORDNUMBER` (company ID). The browser never connects to Snowflake directly.

DEPLOYMENT PHASES

**Phase 1 — Live today (Netlify embed)**

- Netlify hosts built SPA + static JSON + `embed.js`
- Impexium pages at `/engagement/{recordNumber}` load embed snippet
- Embed reads path → iframe → app loads `/data/reports/{recordNumber}.json`
- Excel workbook → `npm run import:reports` → JSON at build time

UI COMPLETE   EXCEL PIPELINE   NETLIFY DEPLOY

**Phase 2 — Target (my.autocare.org integrated)**

- SPA served from `my.autocare.org/wrapped`
- Impexium SSO cookie validated server-side
- BFF API queries Snowflake secure view per session org
- Factbook & TrendLens® via separate product APIs

SNOWFLAKE VIEW   SSO CLIENT   PROD API DEPLOY

SYSTEM ARCHITECTURE

EXPERIENCE FLOW (SPA SCENES)

**Pre-Journey**  
Dashboard intro, HVAC chrome, start drive-off

**Your Journey**  
Counter gauges: tenure, contacts, community, committees

**GPS Nav**  
Events attended, webinar hours, attendance route track

**Under the Hood**  
Standards subscriptions, database icons

**Kick the Tires**  
Product hubs: TrendLens®, Demand Index, Academy, Factbook

**Full Diagnostics** — summary panel with journey row, attendance route, webinar card, and share CTA. Conditional copy in `contentVariants.ts` handles zero-event and low-engagement cases.

FRONTEND (THIS REPOSITORY)

BACKEND (AUTO CARE STACK)

**Key modules**

- `AuthGate` — loading, 401, 404, error states
- `WrappedReportContext` — fetch report once via context
- `DrivingView` — orchestrates all journey scenes
- `buildJourneySections.ts` — report → UI sections
- `contentVariants.ts` — conditional copy & CTAs
- `externalCtaLinks.ts` — centralized external URLs
- `import-excel-reports.mjs` — Excel → `WrappedReport` JSON

**API responsibilities (Phase 2)**

- Validate Impexium SSO session (cookie or BFF)
- Map Impexium org ID → Snowflake `company_id`
- Query pre-aggregated secure view via Snowpark / JDBC
- Map row → `WrappedReport` JSON; return 404 if no row
- Ref implementation: `server/reference-api.mjs`

DATA CONTRACT — WRAPPEDREPORT

| DOMAIN    | FIELDS (SOURCE → SPA)                                                          | UI SURFACES                                                |
|-----------|--------------------------------------------------------------------------------|------------------------------------------------------------|
| company   | <code>id</code> , <code>name</code> ; optional <code>member.displayName</code> | Intro welcome, report scope                                |
| journey   | Tenure, active contacts, community, committee counts                           | Your Journey counters, Full Diagnostics row                |
| events    | In-person attended/total, <code>attendancePct</code> , webinar hours           | GPS nav, attendance route track (variant copy if 0 events) |
| products  | TrendLens®, Demand Index, Factbook, Academy usage                              | Kick the Tires readout hubs + external CTAs                |
| standards | Subscribed %, missing product list                                             | Under the Hood standards popup                             |

Endpoints (Phase 2)

- GET /api/wrapped/report
- GET /api/wrapped/health

Auth model

- Reuse my.autocare.org Impexium SSO
- Cookie: credentials: include
- 401 → redirect to SSO login

Local dev

- npm run dev + static JSON
- Scenarios: default / zero-events / high-engagement
- npm run dev:api for reference API

OPEN DECISIONS (PARTNER DISCOVERY)

| DECISION                   | OPTIONS                                                | OWNER                |
|----------------------------|--------------------------------------------------------|----------------------|
| Snowflake company key      | Impexium org ID · CRM account ID · member number       | Snowflake + Impexium |
| Access pattern             | Snowpark Python · JDBC + secure view · SQL REST API    | Snowflake + Infra    |
| Session model              | Shared cookie on .autocare.org · BFF token exchange    | Impexium + Infra     |
| Factbook / TrendLens® APIs | Separate product endpoints · bundled in Snowflake view | Product + Snowflake  |
